The Choice beef cutout reached a record high of $4.14/lb. the first week of September 2025. Prices decreased for nine consecutive weeks from the beginning of November through early January, but the Choice cutout then trended higher for five weeks through early February. The cutout then edged lower in mid-February, before trending higher for four weeks and reaching $4.02/lb. in mid-March, the highest since mid-September. The cutout then trended modestly lower over the following three weeks before stabilizing in mid-April. The cutout has been trending slightly higher over the last two weeks, and this week, the cutout averaged up 1% from last week to an average of $3.89/lb., which was up 13% from last year and up 32% from 2024. 7 weeks ago, the Select cutout reached a new record high of $3.95/lb. The cutout then trended lower over the following four weeks. The cutout has been increasing slightly for the last two weeks, and this week, it averaged up 0.8% to $3.88/lb., which was up 20% from last year and up 34% from 2024.

The Choice/Select spread widened from $0.33/cwt last week to just $1.26/cwt this week, which compared to $20.36/cwt last year and $5.74/cwt in 2024. The share of fed beef production grading Select was only 8.7% year-to-date, down from 12.4% last year, while the share grading Choice was 73.3%, down just slightly from 73.4% last year.

The share of fed beef production grading Prime is up massively from last year's already high levels. From January through the week ending Aprill 25 (the latest available data), 15.2% of fed beef production graded Prime, up from 11.3% last year. The share of fed beef production grading Prime has been over 15% for seven out of the last eight weeks. The share was reported at an all-time record high of 17.02% for the week ending April 18, surpassing the previous high of 16.36% for the week ending April 11. For the week ending April 25, the share reached a new record of 17.09%, and was above 17% for the second consecutive week. (However, these percentages are often revised, so there is the potential for revisions). The weekly Prime cutout value is published on Mondays in the comprehensive beef report, so the latest available Prime cutout is for the week ending April 24. That week, the Prime cutout averaged $3.98/lb., up 12% from last year and up just 15 cents/lb. from the Choice cutout. Year-to-date, the Prime-Choice spread was just 16.5 cents/lb., down from 44 cents/lb. last year on the relative increase in Prime availability.

Compared to last week, values increased for the Choice chuck (+2%), round (+2%), flank (+2%), and rib (+1%) primals. The Choice loin and short plate primals values were steady, while the value for the Choice brisket primal decreased 1%).

Prices for Choice top inside rounds have been trending higher over the last two weeks, and this week, prices increased by 3% to an average of $4.28/lb., the highest in six weeks. Prices were up 16% from last year and up 35% from 2024. Prices for Choice gooseneck rounds edged down 1% this week to an average of $4.04/lb., up 34% from last year and up 41% from 2024. 50% beef trim prices reached $1.91/lb. during the second half of March, which was the highest since last July. Prices increased in the second half of April and reached $1.92/lb. last week, which was the highest since July. Prices held steady at $1.92/lb. this week, which was up 72% from last year and up 144% from 2024.

This week, domestic 90% beef trim prices edged higher from last week and reached a new record of $4.52/lb. Prices were up 21% from last year and up 30% from 2024. Demand remains strong and supplies are tighter for domestic lean beef due to smaller cow slaughter. Imported 90% beef trim prices reached a record $4.01/lb. in mid-November, but prices have adjusted down from that record (although they remain historically high). Prices averaged down 4.5% from last week to an average of $3.69/lb. this week, which was up 10% from last year and up 31% from 2024. Imported beef trim from countries except Mexico and Canada was subject to an additional reciprocal duty of at least 10% from April through mid-November 2025 when President Trump ordered the immediate removal of reciprocal tariffs on beef (among other select products), so 90% lean imports no longer have an additional tariff. And beef is exempt from the temporary 10% global tariff imposed since February 24.

Weekly estimated beef production was 480.4 million lbs., up 1.0% from last week but down 1.8% from last year. This was the highest weekly beef production level since mid-February. 2026 year-to-date production was down 5.8% from last year. 2025 annual beef production was down 3.6% from 2024.
